ELERS MEDICAL[®] Antimicrobial Disposable Curtains

Disposable Curtains for Safety and Patient Comfort

Elers Medical Finland offer a complete range of highest-quality Antimicrobial and Untreated Disposable Medical Curtains. It is widely recognised by Hospital Infection Prevention experts that hospital curtains have the potential to become a source of pathogenic transmission especially as Hospital Acquired Infections (HAIs), such as MRSA, can remain on a curtain's surface for long periods of time.

Elers Medical's technology, used on the Elers range of Antimicrobial Disposable Curtains, utilises a patented controlled release technology which delivers a low concentration of silver ions to curtain surfaces to control bacteria. This patented technology can help reduce pathogenic transfer from the surface of the curtain.

Independently tested according to the relevant Internationally accepted Antimicrobial textile standards, ISO 20743 and ISO 22196, Elers Medical Antimicrobial Disposable Curtain material is proven above Log 3 effective against multiple organisms such as MRSA, Staphylococcus aureus, Klebsiella pneumoniae and Escherichia coli. Flame retardant (FR) and compliant with International Standards NFPA 701 and BS 5867 PART 2 TYPE C, Elers Medical Disposable Curtains remain FR protected for the lifetime of the curtain.

«Requiring no laundering or costly initial capital expenditure, Antimicrobial Disposable Curtains should become an integral part of every hospital's overall infection control protocol.»

Once implemented, a programme of regular curtain replacement can be augmented by a policy of immediate change for those areas that have been exposed to high infection risk or for any curtains which have become visibly soiled or contaminated. Elers Medical recommend that Patient Safety Curtains are replaced every 6-12 months, but this is solely dependent on the individual hospital or Healthcare Trust guidelines.

Benefits

- ✓ Manufactured with a silver ion based treatment which is a proven effective antimicrobial agent and directly helps to reduce pathogenic transfer from the surface of the curtain.
- ✓ Independently tested according to the Internationally accepted Antimicrobial Textile standards – ISO 20743 and ISO 22196. Proven effective against multiple organisms such as MRSA, Staphylococcus aureus, Klebsiella pneumoniae and Escherichia coli.
- ✓ International Flame Retardant (FR) Approvals – tested to BS 5867: Part 2 Type C and NFPA 701. Inherently FR protected; the FR properties remain with the curtain during its life cycle.
- ✓ 6 stocked colour options with further pantones available
- ✓ Range of different hanging systems available, compatible with most commonly used track systems.
- ✓ Heat sealed self-auditing and dignity labels including unique identification number for traceability
- ✓ Requiring no laundering or costly initial capital expenditure
- ✓ Significant cost savings over traditional textile curtains
- ✓ Easy to change and easy to store
- ✓ 100% recyclable

Curtain Range

Curtains are compatible with most curtain tracks used within healthcare environments and can be either supplied with a hook or as eyelet only – To allow use with existing track hook and glider systems.

Untreated

Designed as a low cost solution for those areas with reduced risk and high patient turn over.

Antimicrobial

Designed for those areas where patient safety is paramount. Elers Medical Antimicrobial Curtains are proven against multiple organisms such as MRSA.

Perforated

Available both as Antimicrobial and Untreated. The perforations allow air to circulate around the bed space and ceiling mounted sprinkler system to work.
